

8xMPS-A

8-CHANNEL MINIATURE DIFFERENTIAL AND ABSOLUTE PRESSURE SENSOR FOR CAN BUS

Ref: 8xMPS-A-M###-P###

SN: P#####

Software version: v#.###

Texys sensors are designed for data recording. If the user wants to include this sensor in a close loop system or active control, he must assume all responsibility.

Differential pressure		
Range	-400 to +400	mBar
Sensitive Element	Piezo resistive Cells	
Proof Pressure	1.7	Bar
Resolution	Up to ±250 mBar range	0.01 mBar/bit
	Above ±250 mBar range	0.1 mBar/bit
Max offset error (from 5°C to 105°C)	± 0.1	mBar
Max hysteresis and non-repeatability error (from 5°C to 105°C)	± 0.15	mBar
Max non-linearity error (from 5°C to 105°C)	± 0.1	% FS
Noise	At 10Hz	3 μBar
	At 200Hz	10 μBar
Sampling frequency	800	Hz
Analog filter cut off frequency	200	Hz
Output frequency	1Hz to 200Hz or on trigger	
Absolute pressure

Proof Pressure	2.5	Bar
Resolution	10	μBar/bit
Accuracy (from 5°C to 105°C)	± 1	mBar
Sampling frequency	800	Hz
Analog filter cut off frequency	200	Hz
Output frequency	1Hz to 200Hz or on trigger	
Internal temperature		
Range	-20 to 120	°C
Sampling Frequency	40	Hz
Output frequency	5	Hz
Common		
CAN type	2.0A or 2.0B	-
CAN baudrate	250 to 1000	kbps
Supply Voltage	6 to 30	V
Supply Current (at 12V)	20	mA
Calibrator	MENSOR CPC4000	
Dimensions	40.3 x 32.4 x 9.5	mm
Material	Aluminum	
Weight (without cable)	23	g
Protection	IP64	
Vibration test	20Gpp 5'	
Shock	500	G
Operating Temp	+5 to +125	°C
Storage Temp	-40 to +125	°C

This sensor withstands high humidity. Avoid water entering in the tube as well as condensation, it may block the pressure.
Do not blow into the tubes with the mouth or a compressed air line.

CAN Data input

Trig frame on CAN request mode

Rx Frame (default Rx Frame ID: 0x07F0)

Max frequency: 200Hz

ID	Byte 0	Byte 1	Byte 2	Byte 3	Byte 4	Byte 5	Byte 6	Byte 7
0x07F0	Sensor ID	Multiplexed Msg ID	-	-	-	-	-	-
	ID or 0xFF (all sensors)	0,1,2 or 0xFF (all Msg)						

Auto-Zero command for differentials pressures

Command input frame

ID	Byte 0	Byte 1	Byte 2	Byte 3	Byte 4	Byte 5	Byte 6	Byte 7
0x07F1	0xFF	-	-	-	-	-	0x00 or 0x01	0x01

0x00: volatile autozero
0x01: non-volatile autozero

Acknowledge output frame

ID	Byte 0	Byte 1	Byte 2	Byte 3	Byte 4	Byte 5	Byte 6	Byte 7
0x07F3	0xFF	Serial Number				0x00	0x00	0x01
		Unsigned integer 32 bit						

This command can be used to re-zero all channels. This mechanism can be enabled or disabled (please refer to "Enable Auto-Zero command" of the CAN parameters tab). Each time the sensor will receive one of the above CAN frames, the autozero function will be launched (except during first second after power-on). When autozero function is launched, a "customer offset" is set up and added for each channel on top of factory calibration.

If Byte 6 value is 0x00:

Those "Customer offsets" will be stored in volatile memory. Therefore, they will be lost when switching OFF the sensor and they will be initialized to 0 when switching ON the sensor.

If Byte 6 value is 0x01:

Those "Customer offsets" will be stored in non-volatile memory. Therefore, they will be saved in memory when switching OFF the sensor.

Offset adjustment command for absolute pressure

Command input frame

ID	Byte 0	Byte 1	Byte 2	Byte 3	Byte 4	Byte 5	Byte 6	Byte 7
0x07F1	0xFF	-	MSB	LSB	-	-	-	0x02
			Desired absolute pressure					
			Unsigned integer 16 bit					
			600mbar + 10µBar/bit					

Acknowledge output frame

ID	Byte 0	Byte 1	Byte 2	Byte 3	Byte 4	Byte 5	Byte 6	Byte 7
0x07F3	0xFF	Serial Number				0x00	0x00	0x02
		Unsigned integer 32 bit						

This command can be used to adjust the offset on absolute pressure static channel. This mechanism can be enabled or disabled (please refer to "Enable Auto-Zero command" of the CAN parameters tab). Each time the sensor will receive the above CAN frame, the offset adjustment function will be launched (except during first second after power-on). When offset adjustment function is launched, a "customer offset" is set up and added on top of factory calibration. This "Customer offset" will be stored in non-volatile memory. Therefore, they will be kept in memory when switching OFF the sensor.
